## How To Educate Using Webex During Covid-19 Outbreak

With the rise of Covid-19 in the United States we are facing the reality of interacting with our peers and students using technology. The challenge presented is that most of our educators do not feel comfortable teaching students using video and screen sharing. To help bridge the gap between technology and education we will be holding a one-hour session where we will review best practices for teaching utilizing Cisco's Webex meetings platform, and Webex Teams.

This session will be led by Dr. Lance Ford. Dr. Lance Ford is an educational technology advocate for Cisco. For the seven years prior, he served as a teacher and technology facilitator/coordinator for Howe Public Schools in Howe, Oklahoma. He completed his PhD in Educational Administration, Curriculum and Supervision in the summer of 2009 from the University of Oklahoma. As a technology trainer, Lance has had the opportunity to train over 3500 educators from Australia to Maine and Canada to Brazil in the effective implementation of synchronous and asynchronous video technologies into the classroom.

This session is applicable for Educators, and IT professionals that will be involved in distance learning initiatives.

3/13  
2PM EST
